GENERAL

The H-1300 Series is a moderate-pressure instrumentation flow-regulating needle valve. It is generally used for instrumentation panels, sampling systems and accurate applications.

The valves are compact in size and structure and offer reliable low and moderate flow regulation with long service life.

CLEANING & PACKAGING

Every H-1300 series needle valve is cleaned in accordance with Standard Cleaning and Packaging (procedure 8184). Oxygen Clean & Lubricant-Free Cleaning and packaging, in accordance with Special Cleaning and Packaging (procedure 8185), is available as an option. Lubricant-Free cleaned valves have significantly higher actuation torque and MAWP* 1000 psi.

* Maximum Allowed Working Pressure.

"H" and "HF" - 3.3 mm (0.13")

TESTING

The H, HF and HXF Series metering valve designs have been tested for proof and burst.

Every H, HF & HXF-1300 metering valve is factory tested with Nitrogen at 1000 psig (69 bar) for leakage through the seat.

No detectable leakage is allowed during shell test.

FLOW SETTING

H-1300 series metering valve is tested for bubble tight shut-off at 100 psig (6.8 bar) differential pressure.

HF-1300 series metering valve handle dead stop is set at 4 to 10 std cm³/min with 5 psig (0.34 bar) inlet pressure.

HXF-1300 series metering valve handle dead stop is set at 4 to 10 std cm³/min with 15 psig (1.0 bar) inlet pressure.
