#### Event Introduction

At present, the digitalization of the manufacturing industry is constantly developing and iterating, with higher requirements for agile supply chain logistics and faster response to customer requirements.

Compared to traditional factories, digital chemical factories after transformation and upgrading not only need to have a shiny "exterior", but also need its "inside" to truly bring efficiency improvement, cost reduction and operation optimization.

This webinar will share how to plan the logistics of a digital factory through a practical case of logistics planning related to the new digital factory of a joint venture in China.

#### Instructor Introduction

##### Qi Zhao

He has nearly 30 years of experience in supply chain logistics and graduated from the Royal Melbourne Institute of Technology with a master's degree in supply chain.

Qi Zhao has extensive experience in cross-industry work, such as the internal supply chain of the enterprise, third-party logistics and consulting companies, and experience in all aspects from practical to strategic top-level planning.
